## Appendix B: Safety and Toxicity of Individual Antiretroviral Agents in Pregnancy

**Table 10. Antiretroviral Drug Use in Pregnant Women with HIV: Pharmacokinetic and Toxicity Data in Human Pregnancy and Recommendations for Use in Pregnancy<sup>a</sup>** (page 1 of 21)

**Note:** When using FDCs, refer to other sections in Appendix B and Table 10 for information about the dosing and safety of individual drug components of the FDC during pregnancy.

Generic Name (Abbreviation) Trade Name	Formulation	Dosing Recommendations	Use in Pregnancy	Last Reviewed
<b>NRTIs</b>				
NRTIs are recommended for use as part of combination regimens, usually including 2 NRTIs with either an NNRTI or 1 or more PIs. Use of single or dual NRTIs alone is not recommended for treatment of HIV infection. See text for discussion of potential maternal and infant mitochondrial toxicity.				
<b>Abacavir</b> (ABC) <i>Ziagen</i>  (ABC/3TC) <i>Epzicom</i>  (ABC/DTG/3TC) <i>Triumeq</i>  (ABC/3TC/ZDV) <i>Trizivir</i>  <b>Note:</b> Generic available for some formulations.	<u>ABC (Ziagen)<sup>d</sup></u> <i>Tablet:</i> • 300 mg  <i>Solution:</i> • 20 mg/mL  <u>ABC/3TC (Epzicom)<sup>d</sup></u> • ABC 600 mg plus 3TC 300 mg tablet  <u>ABC/DTG/3TC (Triumeq):</u> • ABC 600 mg plus 3TC 300 mg plus DTG 50 mg tablet  <u>ABC/3TC/ZDV (Trizivir)<sup>d</sup></u> • ABC 300 mg plus 3TC 150 mg plus ZDV 300 mg tablet	<u>Standard Adult Doses</u> <i>ABC (Ziagen):</i> • ABC 300 mg twice daily or ABC 600 mg once daily, without regard to food  <i>ABC/3TC (Epzicom):</i> • 1 tablet once daily without regard to food  <i>ABC/DTG/3TC (Triumeq):</i> • 1 tablet daily without regard to food  <i>ABC/3TC/ZDV (Trizivir):</i> • 1 tablet twice daily without regard to food  <u>Dosing in Pregnancy:</u> • No change in dose indicated.  <u>PK in Pregnancy:</u> • PK not significantly altered in pregnancy.  • For guidance about use of combination products in pregnancy, please see the specific sections on other components (i.e., 3TC, ZDV, DTG).	High placental transfer to fetus. <sup>b</sup>  No evidence of human teratogenicity (can rule out 1.5-fold increase in overall birth defects).  HSRs occur in approximately 5% to 8% of nonpregnant individuals. A small percentage of reactions are fatal, and these fatal reactions are usually associated with re-challenge. Rate of reactions during pregnancy is unknown. Testing for HLA-B*5701 identifies patients at risk of reactions and should be done and documented as negative before starting ABC. Patients should be educated regarding symptoms of HSR.	December 7, 2018
<b>Didanosine</b> (ddl) <i>Videx</i> <i>Videx EC</i>  <b>Note:</b> Generic available for some formulations	<u>ddl (Videx)</u> <i>Buffered Tablets (Non-EC):</i> • No longer available  <i>Solution:</i> • 10 mg/mL oral solution  <u>Videx EC (EC Beadlets) Capsules:</u> • 125 mg • 200 mg • 250 mg • 400 mg  <u>Delayed-Release Capsules:<sup>d</sup></u> • 200 mg • 250 mg • 400 mg	<u>Standard Adult Doses</u> <i>Body Weight ≥60 kg:</i> • ddl 400 mg once daily  <u>With TDF:</u> • ddl 250 mg once daily; take 1/2 hour before or 2 hours after a meal.  <i>Body Weight &lt;60 kg:</i> • ddl 250 mg once daily  <u>With TDF:</u> • ddl 200 mg once daily; take 1/2 hour before or 2 hours after a meal.  <b>Note:</b> Preferred dosing with oral solution is twice daily (total daily dose divided into 2 doses). Take 1/2 hour before or 2 hours after a meal.  <u>Dosing in Pregnancy:</u> • No change in dose indicated.	ddl <b>is not recommended</b> for pregnant women.  Low-moderate placental transfer to fetus. <sup>b</sup>  ddl <b>should not be used</b> with d4T. Lactic acidosis, sometimes fatal, has been reported in pregnant women receiving ddl and d4T together.	December 7, 2018

<p><b>Efavirenz</b> (EFV) <i>Sustiva</i>  (EFV/FTC/TDF) <i>Atripla</i>  (EFV/3TC/TDF) <i>Symfi</i>  (EFV/3TC/TDF) <i>Symfi Lo</i>  <b>Note:</b> Generic available for some formulations.</p>	<p><u>EFV (Sustiva)<sup>d</sup></u>  <u>Capsules:</u>                      • 50 mg                      • 200 mg   <u>Tablet:</u>                      • 600 mg   <u>EFV/FTC/TDF (Atripla):</u>                      • EFV 600 mg plus FTC 200 mg tablet TDF 300 mg plus   <u>EFV/3TC/TDF (Symfi):</u>                      • EFV 600 mg plus 3TC 300 mg plus TDF 300 mg tablet   <u>EFV/3TC/TDF (Symfi Lo):</u>                      • EFV 400 mg plus 3TC 300 mg plus TDF 300 mg tablet</p>	<p><u>Standard Adult Doses</u>  <i>EFV (Sustiva):</i>                      • EFV 600 mg once daily at or before bedtime, on an empty stomach to reduce side effects   <i>EFV/FTC/TDF (Atripla):</i>                      • 1 tablet once daily at or before bedtime, on an empty stomach to reduce side effects   <u>EFV/3TC/TDF (Symfi or Symfi Lo):</u>                      • 1 tablet once daily on an empty stomach and preferably at bedtime   <u>PK in Pregnancy:</u>                      • AUC is decreased during the third trimester compared with postpartum, but nearly all third-trimester participants exceeded target exposure.   <u>Dosing in Pregnancy:</u>                      • No change in dose is indicated.</p>	<p>Moderate placental transfer to fetus.<sup>b</sup>                       The FDA advises women to avoid becoming pregnant while taking EFV and advises health care providers to avoid administration during the first trimester of pregnancy, as fetal harm may occur.                       Although the limited data on first-trimester EFV exposure cannot rule out a 2-fold or 3-fold increased incidence of a rare outcome such as NTDs, the available data from a meta-analysis of &gt;2,000 births suggest that there is no large increase in the risk of neural tube defects with first-trimester exposure (e.g., a 10-fold increase to a rate of 1%). As a result, the current Perinatal Guidelines do not restrict the use of EFV in pregnant women or in women who are planning to become pregnant. This is consistent with both the British HIV Association and WHO guidelines for use of ARV drugs in pregnancy.</p>	<p>December 7, 2018</p>

Ritonavir (RTV) Norvir	RTV (Norvir) <i>Capsules:</i> • 100 mg <i>Tablets:</i> • 100 mg <i>Oral Solution:</i> • 80 mg/mL <i>Powder:</i> • 100 mg/sachet	<u>Standard Adult Dose as PK Booster for Other PIs:</u> • RTV 100–400 mg per day in 1–2 divided doses (refer to other PIs for specific dosing recommendations.) <i>Tablet:</i> • Take with food. <i>Capsule or Oral Solution:</i> • To improve tolerability, take with food if possible. <u>PK in Pregnancy:</u> • Lower levels seen during pregnancy than during postpartum. <u>Dosing in Pregnancy:</u> • No dosage adjustment necessary when used as booster.	Low placental transfer to fetus. <sup>b</sup>  No evidence of human teratogenicity (can rule out 1.5-fold increase in overall birth defects).  Should only be used as low-dose booster for other PIs.  Oral solution contains 43% alcohol and is therefore not recommended during pregnancy, because there is no known safe level of alcohol exposure during pregnancy.	December 7, 2018

<sup>a</sup> Individual ARV drug dosages may need to be adjusted in patients with renal or hepatic insufficiency (for details, see the [Adult and Adolescent Guidelines, Appendix B, Table 8](#)).

<sup>b</sup> Placental transfer categories are determined by mean or median cord blood/maternal delivery plasma drug ratio:

**High:** >0.6      **Moderate:** 0.3–0.6      **Low:** <0.3

<sup>c</sup> Only indicated for use in chronic HBV virus infection in adults.

<sup>d</sup> Generic formulation available

<sup>e</sup> WHO recommends maximum dose of 30 mg twice daily regardless of weight.

**Key to Acronyms:** 3TC = lamivudine; ABC = abacavir; ART = antiretroviral therapy; ARV = antiretroviral; ATV = atazanavir; ATV/r = atazanavir/ritonavir; AUC = area under the curve; BIC = bictegravir; CD4 = CD4 T lymphocyte; COBI = cobicistat; d4T = stavudine; ddl = didanosine; DOR = doravirine; DRV = darunavir; DRV/r = darunavir/ritonavir; DTG = dolutegravir; EFV = efavirenz; ETR = etravirine; EVG = elvitegravir; FDA = Food and Drug Administration; FDC = fixed-dose combination; FPV = fosamprenavir; FPV/r = fosamprenavir/ritonavir; FTC = emtricitabine; HBV = hepatitis b virus; HSR = hypersensitivity reaction; IBA = ibalizumab; IDV = indinavir; IDV/r = indinavir/ritonavir; INSTI = integrase strand transfer inhibitor; LPV/r = lopinavir/ritonavir; MVC = maraviroc; NFV = nelfinavir; NNRTI = non-nucleoside reverse transcriptase inhibitor; NRTI = nucleoside reverse transcriptase inhibitor; NTD = neural tube defect; NVP = nevirapine; PI = protease inhibitor; PK = pharmacokinetic; PPI = proton pump inhibitor; RAL = raltegravir; RPV = rilpivirine; RTV = ritonavir; SQ = subcutaneous; SQV = saquinavir; SQV/r = saquinavir/ritonavir; T-20 = enfuvirtide; TAF = tenofovir alafenamide; TDF = tenofovir disoproxil fumarate; TID = 3 times a day; TPV = tipranavir; TPV/r = tipranavir/ritonavir; WHO = World Health Organization; ZDV = zidovudine
